

# RN SECURITY SUITE: TRAINING

## *DRONE*

SOFTWARE FOR THE DATA VISUALIZATION AND POST-PROCESSING

G. MANGIAGALLI

Viareggio, July 28 – August 01, 2025

# Gamon-Drone UAV Mountable connection

## CONNECTION SCHEME

**On Flight**

**Encrypted  
Wi-Fi 2.4 GHz**

**Ethernet**

**Wi-Fi 5 GHz**

- Enable hotspot from remote
- Connect the tablet to the Wi-Fi of the remote
- Default communication link

# Gamon-Drone Portable Connection

## CONNECTION SCHEME

## On Laboratory

- Power Gamon-Drone by wall outlet
- Connect the USB cable from Gamon-Drone to tablet
- Modify the connection setting in the software GUI

# UAV Gamon Drone

## UAV Payload Connection - Probe

To connect the probe, insert the power and communication cable into their respective receptacles. Secure the connection by rotating the connector nut clockwise until fastened. Follow the scheme on the images below to ensure proper connection to the Tablet **or** UAV.

Tablet connection

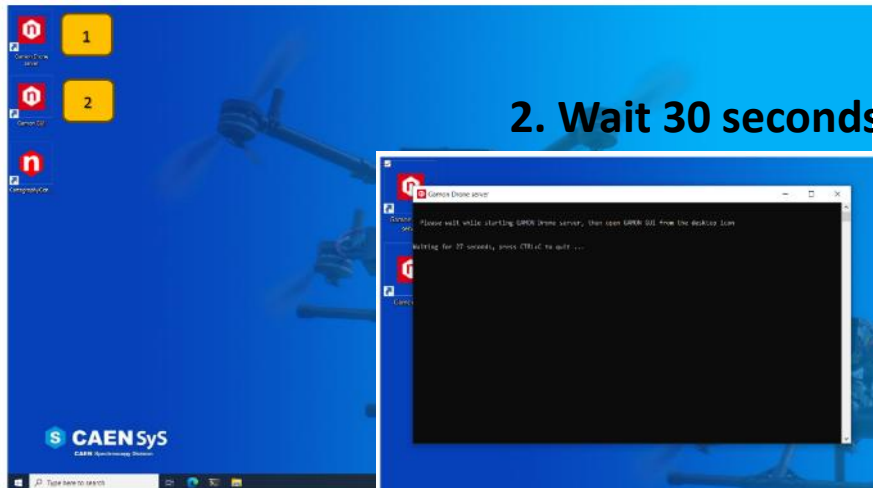

Drone connection

# GUI start-up

## 1. Start the server

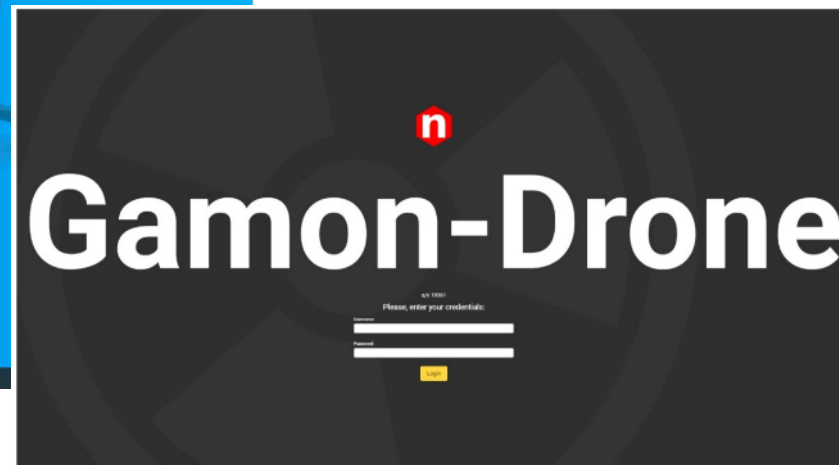

## 2. Wait 30 seconds

## 3. Open the Gamon-Drone GUI

Login: admin

PWD: admin

# Main Page

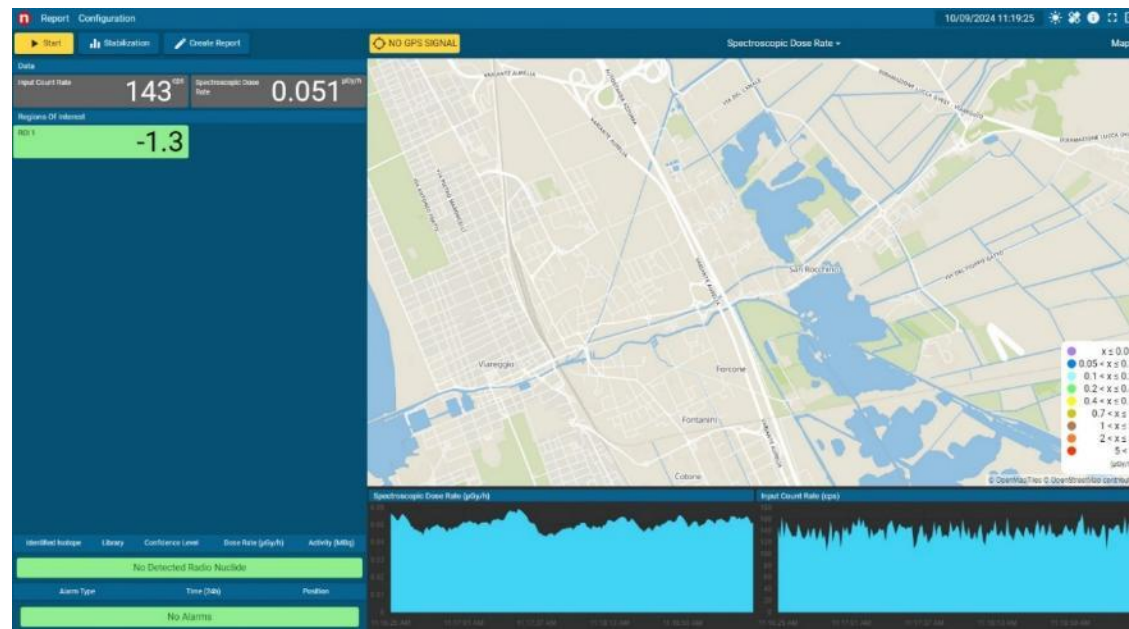

1. Default visualization of the **map** with GPS position of the probe
  - Spectroscopic Dose Rate and Input Count Rate (ICR)

2. Other selections:

Map
Energy Spectrum
Spectroscopic Dose Rate
Input Count Rate

3. **Flow chart** of Spectroscopy Dose Rate and Input Count Rate

# Spectrum Stabilization

1. At the start up, the software performs the **gain stabilization** of the detector, adjusting the energy spectrum according to the position of the peak of the K-40
2. The stabilization is performed during the overall acquisition automatically every time there is a **temperature variation of 2°C**.
3. The user can change the reference peak and stabilization time in the configuration settings.

# Acquisition modes

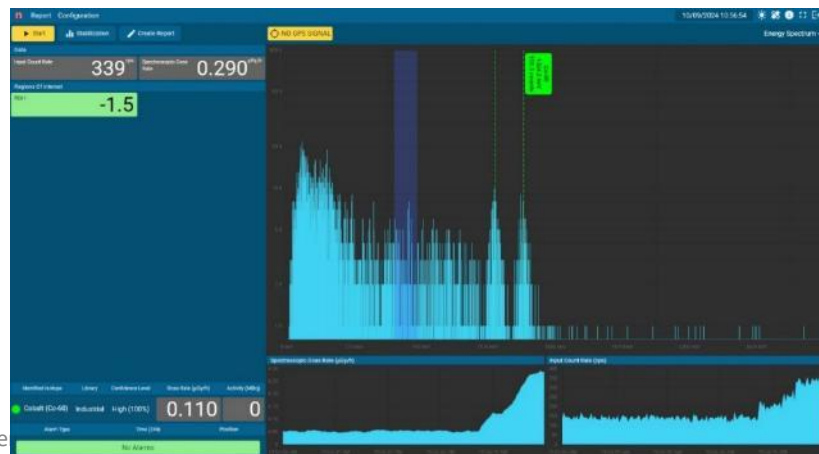

## 1. Operation mode:

- typical survey mode
- spectrum integration over 10 sec
- moving window first in/first out

## 2. Investigation mode:

- typical mode for source identification
- spectrum accumulation from start to stop acquisition
- activity calculation

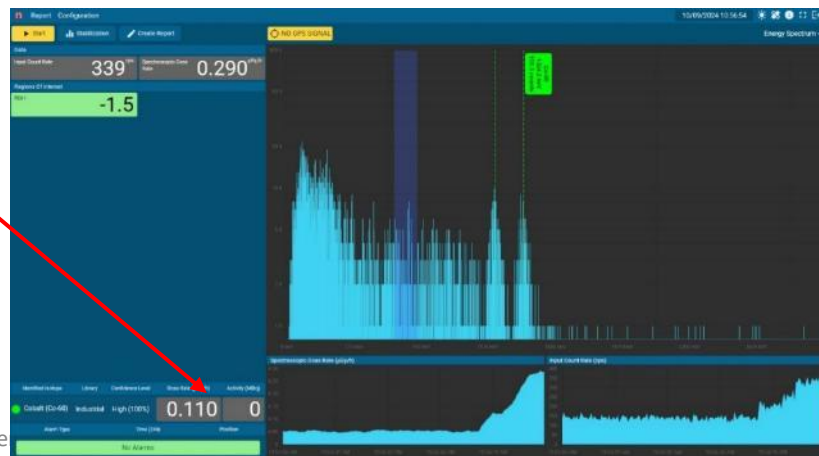

# Special feature

1. **For each single isotope identified:**
  - real time dose rate
  - real time activity of the source (MBq)
2. *The source activity estimation makes the following assumption*
  - *drone in a static position and a fixed height over the detected hot spot*
  - *source is supposed to be a point source (not a spread source over surface)*

# Toolbar and Main Data Display

## 1. Start mission:

- the time counter starts counting
- the mission will be saved with an ID number and the name set by the user in the configuration

## 2. Stop mission:

- confirmation message

## 3. Create Report:

- to save data into the report

## Acquisition

Would you like to stop the acquisition?

## Blue->Stabilization

Data		
Input Count Rate	157 cps	Spectroscopic Dose Rate 0.065 µGy/h
Regions Of Interest		
ROI 1	-1.2	

## Green->Values below the threshold

Data		
Input Count Rate	131 cps	Spectroscopic Dose Rate 0.055 µGy/h

## Grey->Alarm not enabled

Data		
Input Count Rate	147 cps	Spectroscopic Dose Rate 0.058 µGy/h

## Red->Alarm, Yellow->Warning

Data		
Input Count Rate	452 cps	Spectroscopic Dose Rate 0.217 µGy/h

# Region of Interests and List of Radionuclides

**ROI value** corresponds to the ratios between the slope of the count rates in the ROIs in the last 5 counting samples divided by the statistical uncertainty of the slope itself.

- Warning -> the slope is more than 4 times its statistical uncertainty
- Alarm -> the slope is more than 5 times its statistical uncertainty

Identified Isotope	Library	Confidence Level	Dose Rate (μGy/h)	Activity (MBq)
Cobalt (Co-60)	Industrial	High (100%)	0.110	0

## List of Identified radionuclides

The element must be added in the library

Alarm Type	Time (24h)	Position
WARNING: high level of Input Count Rate	12:07:51	,
ALARM: extremely high level of ROI 0	12:07:50	,
level of Gamma Dose Rate is normal	12:03:22	,
level of ROI 0 is normal	12:02:35	,
WARNING: high level of ROI 0	12:02:33	,
level of Spectroscopic Dose Rate is normal	12:00:17	,
level of Input Count Rate is normal	12:00:15	,
WARNING: high level of Input Count Rate	12:00:13	,
WARNING: high level of Gamma Dose Rate	12:00:05	,
WARNING: high level of Spectroscopic Dose Rate	11:59:27	,
level of ROI 0 is normal	11:59:27	,

## List of Warning and Alarms

with the time and position during the acquisition

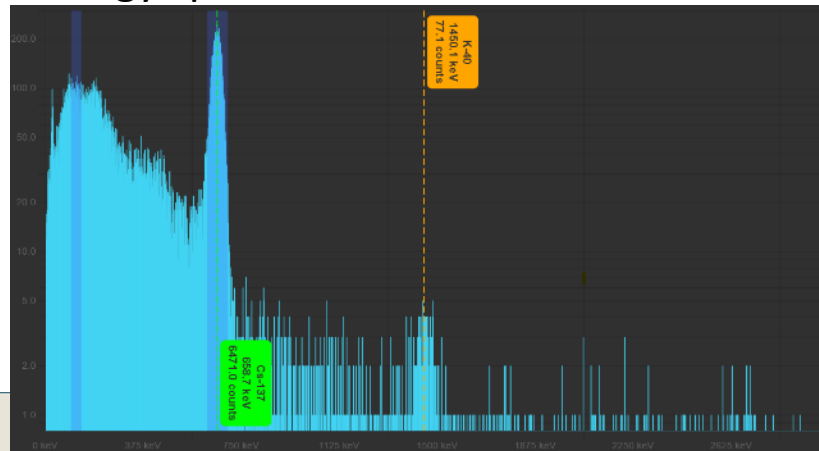

# Main Page plots

## Flow charts

## Energy spectrum

## Map with measured points

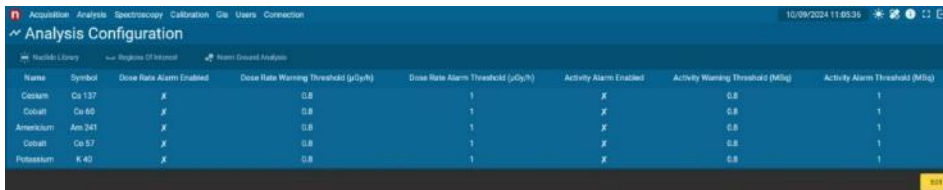

# Configuration -> Acquisition

- **Notes** are an editable field that is recorded in the data reports.
- **Enable Report Data Saving**, that must be checked to save spectrum data into the report.
- **Decimation Period** sets the time granularity of the data saving. For example, if 10 seconds is selected, the system will save the integrated data each 10 seconds.
- **Saved Spectrum Bin Count** indicates the depth of the spectrometer spectrum

- **Acquisition Mode.** The option Operation sets the system for calculating real time data as moving windows for the use of the system in mobile surveys. The option Investigation sets data acquisition such that the calculated quantities are referred to the integrated data, suited for static measurements in areas of interest.
- **Alarm Mode** enables or disables the notification of the warning and alarms. The standard configuration is “Online Acquisition Only”, that allows the alarm to be visualized when the system is running the data acquisition.
- **Mission** is an editable field that is used to label the reports generated automatically by the system after the data acquisition.

# Configuration -> Analysis

Name	Symbol	Dose Rate Alarm Enabled	Dose Rate Warning Threshold ( $\mu\text{Ci/yh}$ )	Dose Rate Alarm Threshold ( $\mu\text{Ci/yh}$ )	Activity Alarm Enabled	Activity Warning Threshold (MBq)	Activity Alarm Threshold (MBq)
Cesium	Cs 137	X	0.8	1	X	0.8	1
Cobalt	Co 60	X	0.8	1	X	0.8	1
Americium	Am 241	X	0.8	1	X	0.8	1
Cobalt	Co 57	X	0.8	1	X	0.8	1
Potassium	K 40	X	0.8	1	X	0.8	1

- **Nuclear Library.** The algorithm will search and identify online radionuclides added in the library. Enable alarm and warning values.

ROI	Status	From (keV)	To (keV)
ROI 1	Enabled	600	730
ROI 2	Enabled		X
ROI 3	Enabled		X
ROI 4	Enabled		X

- **Regions of Interest.** Enable/disable region of interest ranges and alarm in the ROI of the spectrum

Integration Time
20 s

- **NORM Ground Analysis.** Set the integration time of spectrum acquisition for the NORM analysis

# Configuration -> Spectroscopy

**WARNING:** Modifications in the parameters contained in the page may result in system malfunctioning.

- **Temperature Stabilization.** Set the reference peak and the time for acquiring statistics

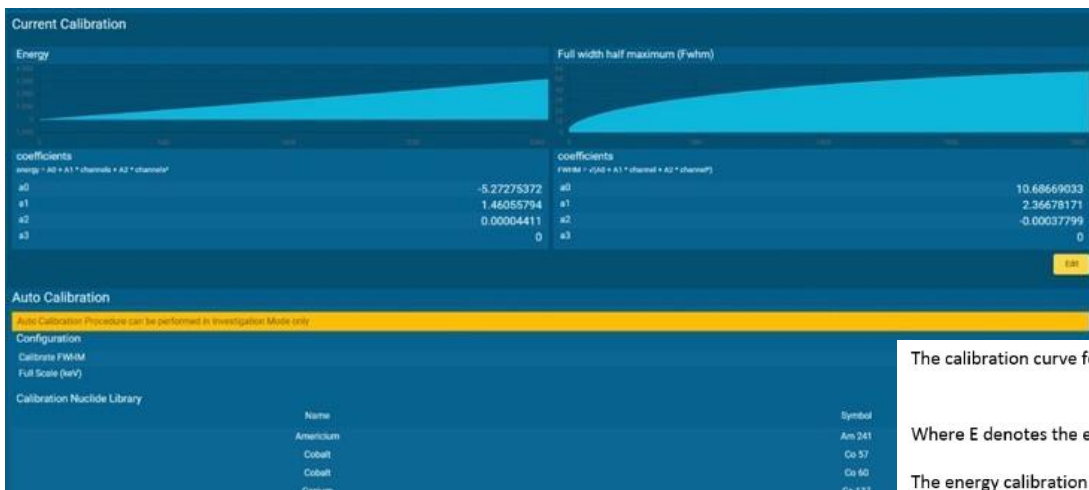

# Configuration -> Calibration

**WARNING:** Modifications in the parameters contained in the page may result in system malfunctioning.

The calibration curve for the FWHM is of the type:

$$FWHM = \sqrt{a_0 + a_1 * E + a_2 * E^2}$$

Where E denotes the emission line energy of a given isotope and FWHM the resolution to that specific energy

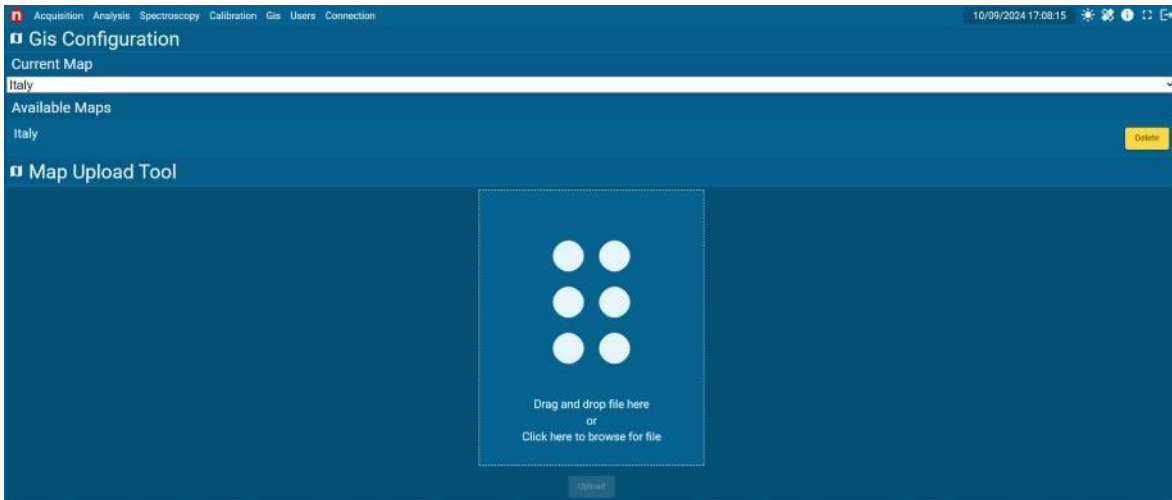

The energy calibration curve, on the other hand, is of the type:

$$E = a_0 + a_1 * ch + a_2 * ch^2$$

Where E indicates the energy of the emission line of a given isotope and ch the channel corresponding to the centroid of that line.

- a0 indicates the term of degree 0
- a1 indicates the term of grade 1
- a2 indicates the term of grade 2

# Configuration -> GIS

Upload the vectorial data that allows the web interface to generate the georeferenced maps for the data point display.

As a default, CAEN provides the GAMON-Drone with the map data relative to geographical area of end user. Additional maps can be requested to CAEN by the end user.

# Configuration -> User & Connection

Management of the Admin and User login and passwords

Data communication settings between the GAMON-Drone spectrometer and the relative tablet

- through the radio communication link and WiFi of the UAV and its remote;
- through the TCP/IP communication of the USB 2.0 cable adapter.

# Reports list

NOTE: In the main page, press «Create Report» button to save the report

# Report information

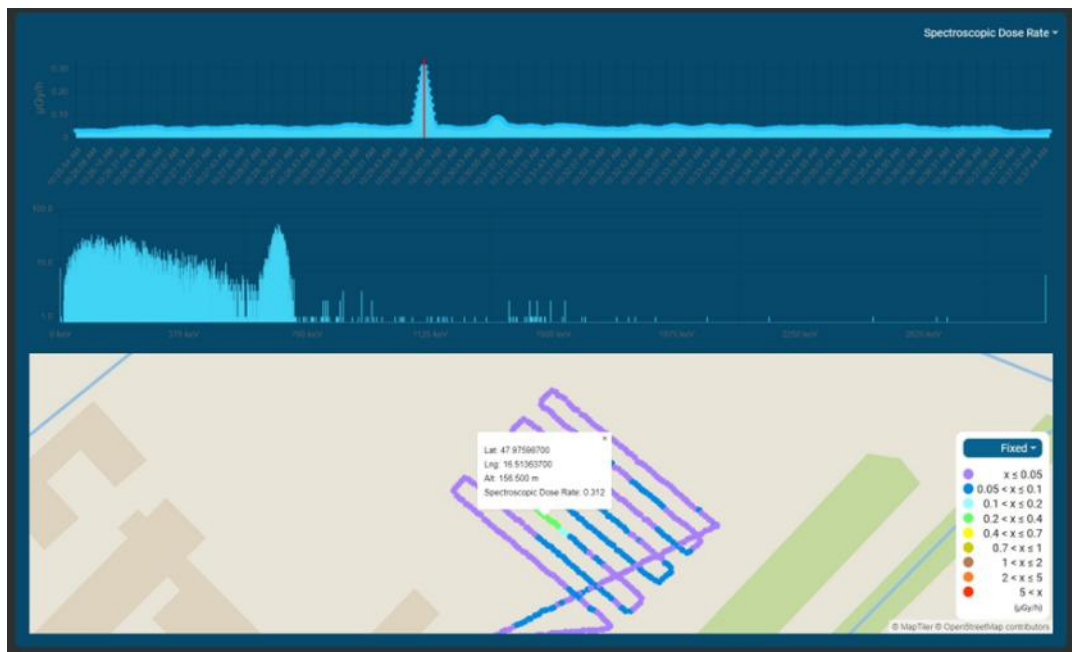

Summary  
mission name/date, etc.

Device info

ICR max, min, average  
Spectroscopic Dose Rate  
Identified Radionuclides

# Report Information

Flow Chart with ICR or Dose Rate for each measured point

Spectrum at the selected time/position

Map with the entire path from Start to Stop Mission

# Data Saving Options

The report can be saved into multiple options:

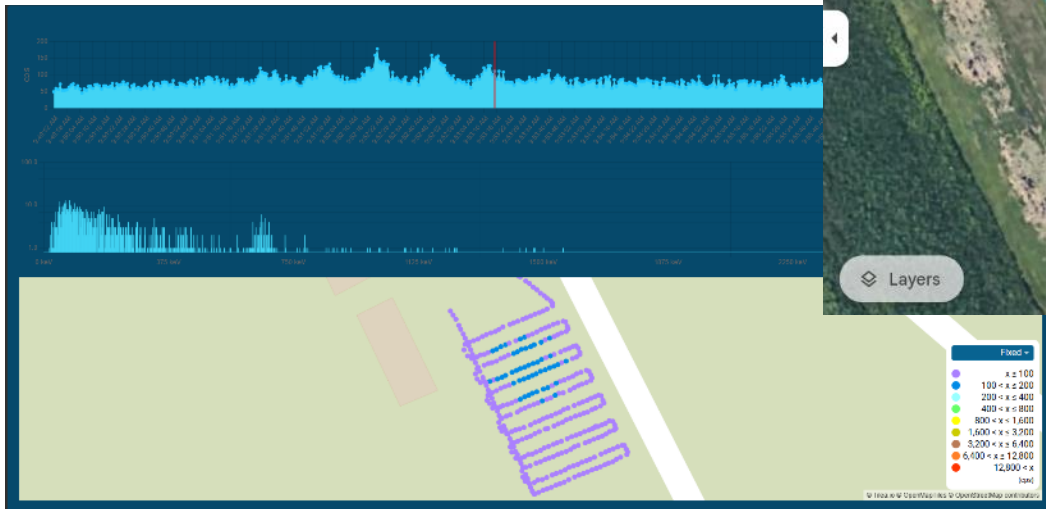

- “Pdf file” saves the report as a pdf file.
- “Download spectra” button transfers all the spectra in the selected time window during the survey, exported in spe files.
- “csv” exports into a .csv file
- “kml” exports the file in a compressed folder where the kml files are saved
- “NORM Ground Analysis” saves the results of the NORM analysis on the acquired spectra with the time granularity defined in the Configuration -> Analysis Configuration -> NORM Ground Analysis section.

# Kml file production

From Gamon software interface  
to Google Earth

# Map post-processing: spectral analysis

Geospectrum

- **Spectrum**
- **LAT**
- **LON**
- **Height**

Full Spectrum Analysis (FSA)

Estimation of the activity concentration  $C$  of natural ( $^{40}\text{K}$ ,  $^{232}\text{eTh}$ ,  $^{238}\text{eU}$ ) and anthropogenic ( $^{137}\text{Cs}$ ) radionuclides through full spectrum ( $S_K$ ,  $S_U$ ,  $S_{Th}$ ,  $S_{Cs}$ ) analysis:

$$M(i) = S_K(i)C_K + S_U(i)C_U + S_{Th}(i)C_{Th} + S_{Cs}(i)C_{Cs}$$

- Total spectrum: linear combination of fundamental spectra
- Fundamental spectra as a function of height obtained with Monte Carlo simulations

# Map post-processing: tabular output
